(Like) Celebration !

Today I had my first studio in Paris, funded by me, all alone and, it's super complicated.

It is part of the **Mogador** a Theater of 1913.

Well located very close the **Opera de Paris**

(Galeries Lafayette)

I have it for 15 days only and as I am really alone in the production of my financial means, I benefit a big totally new studio, with mezzanine and a super large bed, washing machine and very nice equipments, in the private enclosure of the theater for only 30 euros and 7 for expenses.

I had to give only this sum to enter.

I'm so exhausted, so, that is a good opportunity.

Yesterday I received internet in super high speed which was placed in the studio. I will be very sad not to stay there.

I also recovered yesterday, my beloved macbook, that I would like to kiss: it was an incomparable test to be unable to work.

I am now 3 weeks late in my training with Paris Sciences and letters which means that I have to get everything before November 11 to get my mastery and use my skills for my year with the Observatory so,
What do you believe ? is it a cake?

I am really desperate! but I will do everything I can!

So much this course is great and makes me progress in my projects with

adventures completely exciting and a lot difficulties, but really valuables.

These developments are really essential and expected but not easy to achieve without any way as I am currently.

I got asked to take part as Active member of Open Space Makers so I integrate as new entrant, and get to interact with the traditional actors of Space.

It includes that below until I participate in ongoing projects or my own project started!

The association works for the benefit of the general interest and aims to open the world of Space infrastructure to the greatest number so that each citizen can anchor his action in a process of creation of a future world.

In particular, it aims to create, support and animate a national Space ecosystem capable of developing know-how, knowledge and free Space material in a collaborative, open and responsible manner.

To make this possible, the association works for:

Federate the different components of civil society (Fablab, Hackerspaces, Makerspaces, associations, collectives, enthusiasts, etc.) around Space projects.

To develop on the national territory by relying on the places close to each citizen and by forging partnerships with already existing entities.

Set up, support and animate tools, including a web platform, to develop the sharing of experiences, project management, design and collaborative and open learning.

Build a framework, based on a FEDERATION Charter, in which all motivated new entrants can interact with the traditional actors of Space (institutions, laboratories and industry)

Disseminate the work done by its members.

Ensure that any space project is taken into account and supported if it complies with the FEDERATION Charter and if it complies with the legislation in force, and provide the appropriate advice to achieve it.

Management of the brand FEDERATION - Open Space Makers, and its variations, ensuring in particular their proper use in accordance with the FEDERATION Charter.

Perform, in a general way, all the missions necessary for the development of its object.

This association is, by these ends, outside any political, ideological, religious or racial influence.

I am very grateful to have been to join the federation by this event youtu.be/wlpJo3Rgxks

This status which will be active in a few days because I will therefore participate to my first **Makerfaire 2019 while I missed the registration, as an official representant of the federation.**

Following the symposium Human Rights and Scientific Education from **Académie des sciences which I participated, I will finally try to write as soon as possible , my **abstract** on the revolution in Science and the program of enlightenment philosophy Evolution of scientific thinking.**
