Computers of NASA (1960s)

[youtu.be/BRZz0SVLdso](https://youtu.be/BRZz0SVLdso)

**My way of thinking works-as-a-tree, even pulls on my sleep, sleep is very fragile and capricious, eager for details.**

**I have a hard time staying confined to a particular area since every idea brings it to 10.**

**It's almost impossible! So, I'm reluctant to sort: right brain, decision-making is one or the other: it will be either dazzling or impossible.**

**Role of the right part of the brain in the creative process.**

**Well, the privileged functioning of the right brain would come from a lack of paternal presence in early childhood, for example, it was the case of Leonardo da Vinci, David Desmet, a genius of mathematics, who sees the numbers in color and with gradients, and glosses, shades.**

**Hyper lucidity.**

**Damage to Cassandra syndrome?**

**Brain endowed with clairvoyance by the intuition and lucidity and deplores to note the entourage, to live this I can sense, and to be sorry that the entourage did not understand when I entrust the presentiment.**

**Brain that scans everything, permanently, without knowingly doing it, or wanting it.**

**Be surrounded by aesthetics, and creativity. It's not a whim or luxury, it's a need for our balance.**

**Mediocrity and ugliness reach us to the point of depression.**

**It is now a question of reaching and filling the sectors that will help me to get better and it seems to me quite simple now.**
