A writing system is a method of visually representing verbal communication, based on a script and a set of rules regulating its use.

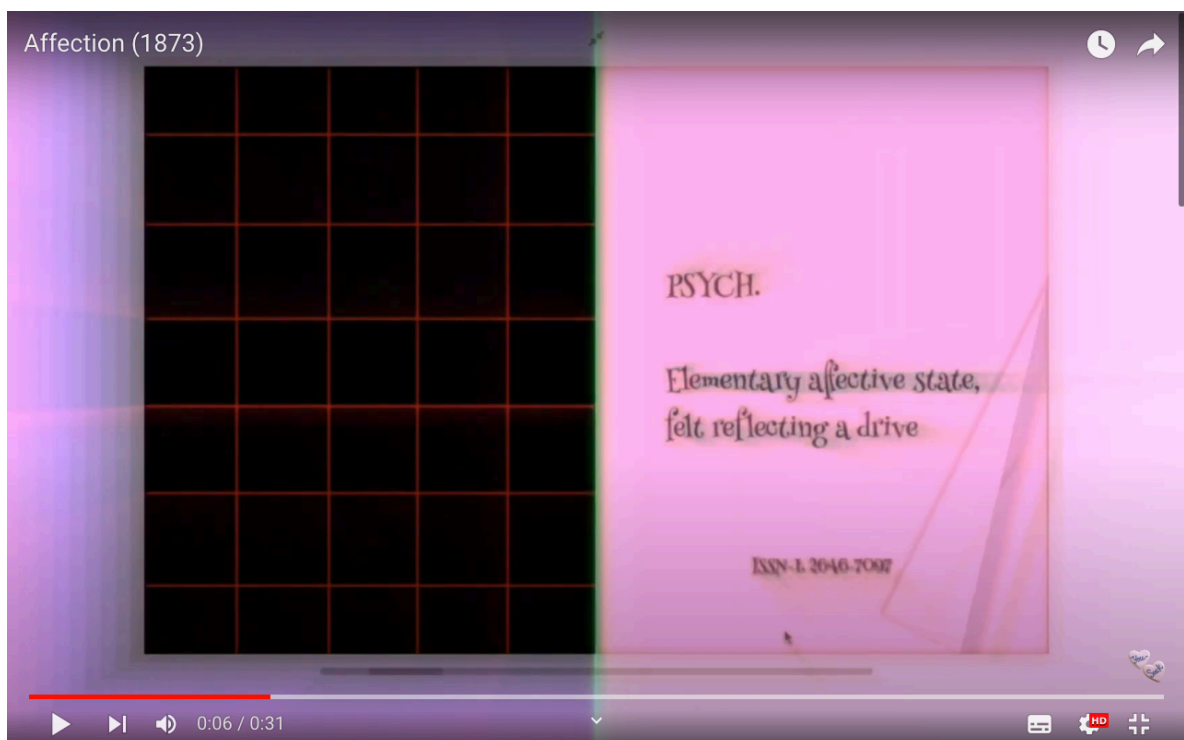

While both writing and speech are useful in conveying messages, writing differs in also being a reliable form of information storage and transfer.

The process of encoding and decoding writing systems involves a shared understanding among writers and readers as to the meaning of the set of symbols or characters used to write.

Handwriting is generally drawn on durable media, such as paper or electronic devices, although non-durable methods can also be used, such as writing on a display device, in the sand or in the sky.
