

In dream. As if!

Baby underground

A writing system is a method of visually representing verbal communication, based on a script and a set of rules regulating its use.

While both writing and speech are useful in conveying messages, writing differs in also being a reliable form of information storage and transfer.

The process of encoding and decoding writing systems involves a shared understanding among writers and readers as to the meaning of the set of symbols or characters used to write.

Handwriting is generally drawn on durable media, such as paper or electronic devices, although non-durable methods can also be used, such as writing on a display device, in the sand or in the sky.

Light sources.

Focus on radiation as a transfer of power in space, propagating in waves in all directions.

The notion of transfer implies that the total power remains the same, unless a part of it is absorbed or diffused.

A primary light source is a body that produces light by transforming another form of energy.

The sun is a good example: the energy released by nuclear fusion causes the production of light by incandescence.

This is also the case for all artificial light sources.

A secondary light source is a source that reflects some of the light it receives.

The moon, the blue sky, the ceiling of an apartment reflect back to us part of the solar radiation they receive. The same goes for most objects.

A source is considered as point when its largest dimension is small compared to the distance which separates it from the observer.

Otherwise, the source is extended, it is perceived as a surface.
