

## Mind

Mag cover [clue](#)

The researcher Steven Harnad, Canada Research Chair in Cognitive Sciences says the right observation: almost all humans behave exactly like psychopaths, exploiting animals.

**I have submitted my research to [COGNITIO 2021](#)**

**Active inference and collective intelligence:**

**The notion of victimology.**

The dimensions of victimology. Infos by my website.

July 27 2021 I received my **Certificate of attendance** from the Institute of Physics in Zagreb.

And, my research TITLE: The notion of victimology has been (pre)approved with the appreciation:

This sounds like a fascinating topic.

How this related to active inference or collective intelligence.

We may want to review this proposal in that light.

For October, I must relate my proposal to active inference, or modeling, or artificial intelligence.

Just before midnight I made the skeleton of the essay, which is, in fact, a first scientific essay for a conference.

This includes 3 years of research but will be translated by 3 strategic points and their relationships.
