

Yellow: Sun + Blue: Moon = Pink: Astro Particles

Update 2. In the process of a gif.

About Update 1.

Analog-to-digital conversion, demonstration + data for the magic of the impression that we feel when seeing the succession of images.

The result of an analysis in different possibilities, essentially stationary objects, mobile objects and continuous transformations. ..

It will be a special workshop on Graphic Interchange Format.

The series of data (which is not a simple matter) took in the second half of the twentieth century a considerable importance in the fields of environmental sciences and in particular in the study and the protection of the atmosphere, because of the interactions of light and in particular solar UV rays with air pollution, water pollution and, to a lesser extent, soil pollution.

And will be mixed by encoding for development, art or security.

It's a very cool workshop and I'm pretty excited to share the writings in the magazine.

It will be a shout out + approach to the importance and interest of kinetics:

By extension, it also relates to the speed of various processes as well as the mechanisms that explain it.

Oh ,readings will be more than scientific data :D

It will be a real spatial experience depending on the degree of data reception.

It's also a try for me to find out if I manage to get it through :D
