

) As written i sent an Abstract submission to Educational Psychology and Astronomy for Mental health and Wellbeing.

Workshop 2022 - training WS - It was accepted.

I decided to offer an atypical format because, more than words to resume again the importance of the study of Astronomy in development, I propose a journey: my journey.

My learnings was first, strange and very complicated, but what I can write about it is that you have to aim for the Moon:

● the Moon will be the best celestial object.

Visible from Earth. It's fascinating and have an impact on learning.

This impact will result in the development of many senses ☾

Many steps are available by baby magazines, mini books, by my website again, plus free resources and things in progress.

Ps: in a more conventional context, I also sent my research from 2018, an abstract excerpt from the eleven-pages original whose title is: Moon Surface and interior.

This extract was added in the workshop, the complete abstract is in the Dialectic tab.
