A special next full Moon.

Harvest Moon and a rare blue Moon on Halloween.

The next Blue Moon will come on October 31, 2020.

It'll be called a Blue Moon because it'll be the 2nd of 2 full moons in a single calendar month.

The last Blue Moon by this definition of the term happened on March 31, 2018

Someday, you might see a true blue-colored Moon in the sky.

Blue-colored Moons are rare aren't necessarily full and happen when Earth's atmosphere contains dust or smoke

particles of a certain size, slightly wider than 900 nanometers

Particles of this size are very efficient at scattering red light.

When these particles are present in our air, and the Moon shines through them, the moon may appear blue in color.

By this definition, there was a Blue Moon on July 31, 2015 - January 31, 2018 and March 31, 2018.

October will close with a rare full Moon on Halloween.

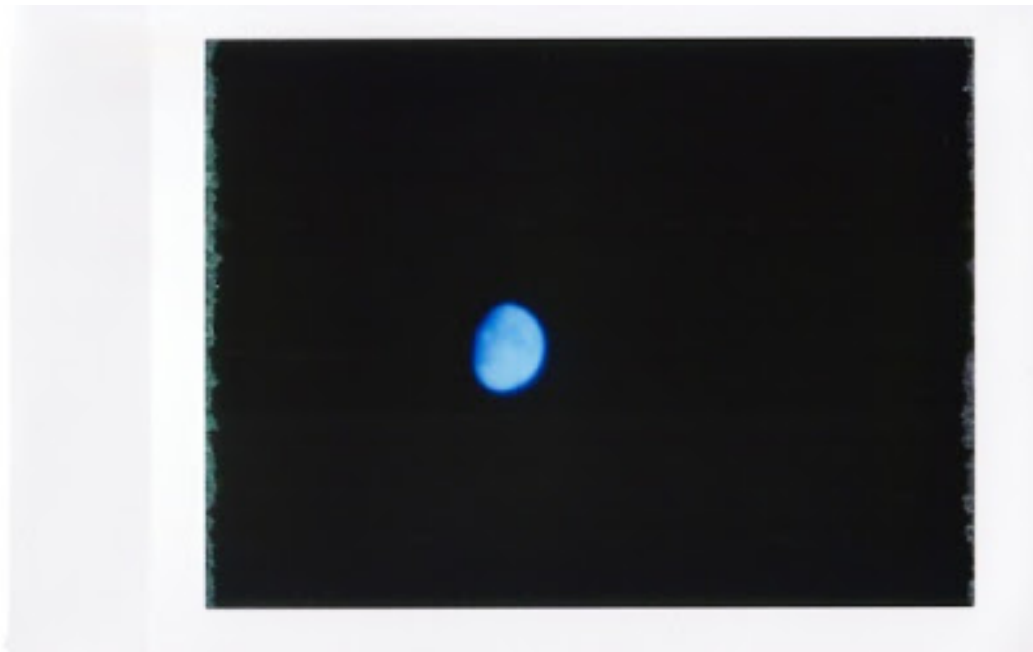

A full moon on Halloween across time zones is even more rare as an event that hasn't occurred since 1944.

So it's a dedication to my grandfathers during the second world war.

However, a full moon occurs on Halloween every 19 years in some time zones, so you can expect a full Halloween Moon again in 2039, 2058, 2077 and 2096.

The full Halloween Moon will rise at 10:49 am ET on October 31, which explains why the Moon will be visible across time zones.

2018 Photography Technique Recall: how to get a blue Moon.
