

October 16, 2021

Overcome the frustration of the end of the sunny season, by going to the moon to discover the fascinating lunar ocean, lunar seas, lunar marshes, lunar lakes and, the strange things to discover by doing a moon-mapping.

A magical learning!

Data learning to photograph the moon and maps on the visible face will be available in the magazine N ° 40 + 41

This workshop will continue until 2022 through my web spaces.
